Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-9, drawn to use of a nucleic acid coding sequence for an enzyme catalyzing production of TAGs, classified in class 800, subclass 281, for example.

5 II. Claims 10 and 15, drawn to fatty acids, classified in class 426, subclass 601, for example.

III. Claims 11-14, drawn to a polypeptide and use of a polypeptide, classified in class 530, subclass 350, for example.

10 The inventions are distinct, each from the other because:

The inventions of Groups I-III are distinct products given that each differs chemically and structurally and none is required by any of the others. In addition, the method of Group I is not required by the products of Groups II and III, wherein the fatty acids and polypeptides can be made by a method that does not require the organisms or nucleic acids of Group I, such
15 as by chemical synthesis. Therefore, each of the claimed inventions are capable of being separately made, independently made and the patentability of one does not render the others obvious or unpatentable.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent
20 subject matter, and the requirement for different areas of search, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
